INSTALLATION MANUAL

Installing the Pabeda App on Android

APPLICATION	VERSION	PACKAGE FILE	INSTALL METHOD
Pabeda Ship Construction	1.0.0 (build 1)	pabeda.apk	Direct / sideload

00 Before you begin

This app is distributed directly by Pabeda Ship Construction Company as an APK file rather than through the Google Play Store, so Android's installer walks you through two extra confirmation screens the first time. This guide shows exactly what each one looks like and what to tap.

> **ONLY INSTALL A FILE YOU TRUST THE SOURCE OF**
>
> Proceed only if you received `pabeda.apk` directly from Pabeda Ship Construction Company — e.g. handed to you by company staff, or downloaded from a link the company gave you. The warnings in Steps 2 and 4 exist to stop exactly the opposite case: an app forwarded to you by someone you don't know. If that's how you got this file, stop and confirm with Pabeda directly before installing.

01 Step-by-step

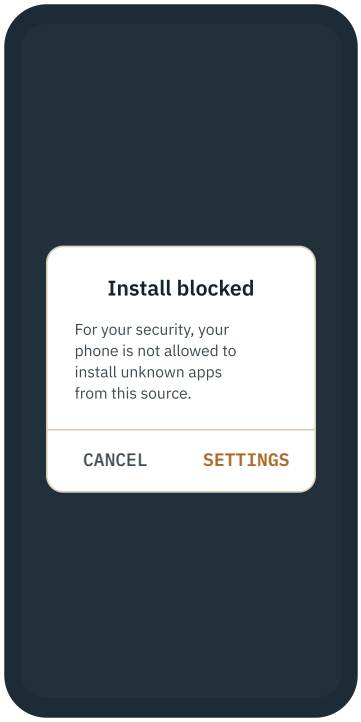

Downloads → pabeda.apk

Step 1

Locate and open the APK

Find `pabeda.apk` wherever you saved it — usually your **Downloads** folder, or the chat/email you received it in. Tap the file once to start installing.

`FILES / DOWNLOADS APP`

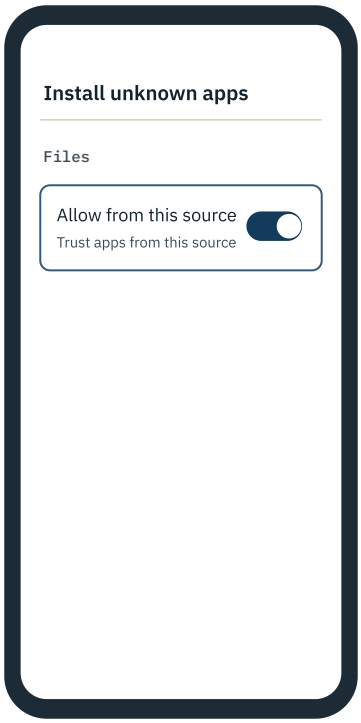

“Install blocked” dialog

Step 2

Allow installs from this source

The first time, Android blocks installs from outside the Play Store by default. This is a standard, one-time check — not a verdict on this specific file. Tap **Settings** on the dialog.

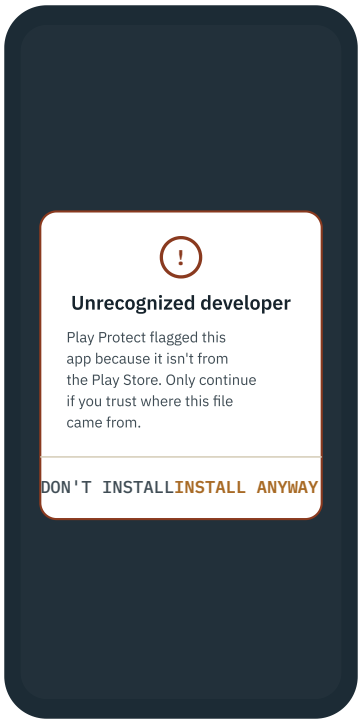

Toggle “Allow from this source”

Step 3

Turn the toggle on

Switch on **Allow from this source** for whichever app you opened the file with (usually *Files* or your browser). Then use the back button to return to the install screen and tap the file again.

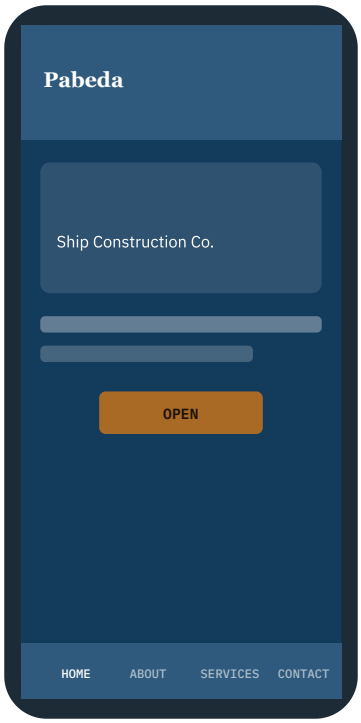

Play Protect check

Step 4

Get past the Play Protect check

Because this build isn't distributed through the Play Store, Play Protect can't vouch for its developer and shows a caution screen — this is expected for any directly-distributed app, including this one, and isn't the same as a confirmed malware detection.

If you're installing the file Pabeda gave you, tap **Install anyway**. If anything about this screen mentions a specific detected threat (not just “unrecognized developer”), stop and contact Pabeda before continuing.

Installed — ready to open

Step 5

Open the app

Android finishes installing in a few seconds and shows an **Open** button — tap it, or find the Pabeda icon on your home screen or app drawer any time after. You'll land on the Home tab, with About, Services, and Contact along the bottom.

02 Troubleshooting

YOU SEE	WHAT TO DO
“There was a problem parsing the package”	The download is incomplete or corrupted. Delete it and get a fresh copy of `pabeda.apk` from Pabeda.
“App not installed”	An older test build is already on the device. Uninstall it first (Section 03), then try again.
No “Install anyway” option, only “Uninstall” or “OK”	Play Protect has hard-blocked the file rather than just cautioning you. Don't try to bypass this — stop and contact Pabeda to confirm the file.
Settings toggle is missing or greyed out	Some work phones and school devices restrict this by policy (MDM). You'll need an administrator to allow it, or install on a personal device instead.

03 Removing the app later

1. **Press and hold** the Pabeda icon on your home screen or app drawer.
2. Tap **Uninstall** (or drag to the “Uninstall” option at the top of the screen).
3. Confirm when prompted. This also turns off the “Allow from this source” permission if no other sideloaded apps use it.
